## **1.0 Overview**

As a precursor to the National Children's Study (NCS), the North Carolina Cohort Study (NC Cohort Study) will provide the opportunity to field test procedures to better inform the implementation of the NCS. In order to test some of the study hypotheses, it will be important to obtain both pre- and post-conception measures of exposure. The NC Cohort Study will enroll 5,000 women who are either pregnant or planning to become pregnant, and follow the children born to them. This demonstration cohort will allow for testing both traditional and emerging technologies to recruit and survey these women and their families, as well as utilizing various methods to ensure high retention rates throughout the study. The experiences gained in the recruitment and data and biological specimen collection of the NC Cohort will inform these procedures for the NCS.

In order to be able to successfully plan, coordinate, and implement such a complex study, RTI staff will work closely with U.S. EPA to identify any supplemental materials and identify any gaps that need further development before specific study materials can be developed. The purpose of this task is to begin to assemble materials from the Program Office and other NCS reports that will be useful in the development of the OMB and IRB applications and operations manuals, and to identify the specific types of manuals that are likely to be required first for the NC Cohort Study, then for the NCS. This document identifies the current status of the preparations for materials to be developed.

## **2.0 Materials Development Schedule**

RTI assumes that the development of Manuals of Operations (MOPs), Quality Assurance Procedures Plans (QAPPs), and Standard Operating Procedures (SOPs) will occur concurrently. Materials development will depend on the study team's finalization of the study protocol for the NC Cohort. The materials development tasks also include ample time for finalization of each document, including time for the U.S. EPA and study team members to review and provide feedback on the materials, as well as time for RTI to incorporate feedback on the materials.

## **3.0 Development of Operations Manuals**

Well planned and developed operations manuals are essential to the success of any research effort. Manuals are used as training tools and references by project staff and/or study participants throughout the implementation of the study as well as documentation of established protocols for historical record and for use during future waves of a study. The final study protocol and operations manuals serve as sources to document the protocol for both OMB clearance and IRB review.

Operations manuals cover all aspects of survey implementation, including procedures for sampling, recruiting and obtaining informed consent, data collection (instrument administration), biological and environmental sample collection and shipment, ensuring subject confidentiality, and

quality assurance. Detailed operations manuals documenting each major activity are necessary to coordinate and implement such a complex study as the NCS.

A typical operations manual begins with an introduction and overview of the research study that provides the foundation for the implementation. This background information should cover the need for collecting data, the intended use of the data, brief overview of the Program Office mission, and the contractor's role. Following the introductory sections, each manual begins to cover task-specific activities, describing how and when specific project tasks will be performed, and presenting a project schedule. The number of chapters required is dependent on the complexity and volume of tasks to be completed. Regardless of the type of manual, most operations manuals typically end with administrative details such as documentation of labor hours and expenses and other administrative issues required of contractor or subcontractor staff. Appendices are often used to depict data collection instruments, forms, supplemental materials, and other procedures that may not be easily included in the body of the manual.

For this Work Assignment Task, RTI has developed several examples of draft outlines of typical operations manuals. Example Tables of Contents for the following types of manuals have been included as appendices:

- Data Systems Development Manual, Appendix A
- Recruitment Manual, Appendix B
- Clinical Procedures Manual, Appendix C
- Field Interviewer Manual, Appendix D
- Participant Procedures Manual Outline, Appendix E
- Sample Logistics and Processing Manual, Appendix F

Once the study protocols have been established, RTI will utilize the appropriate sources of information to finalize the manual outlines and to develop these manuals in accordance with the U.S. EPA's specifications.

## **4.0 Assembling Documentation for Review**

Documentation to support the development of operations manuals to carry out the NC Cohort Study began with a review of existing materials and documents developed as a result of the work of various NCS committees and working groups. We have identified materials under development that could be considered as potential sources of information for the operations manuals. In addition, we have begun to identify other studies that have data collection components similar to those proposed for the NCS (e.g., questionnaire administration, biospecimen collection) in order to develop broad outlines of the topics typically covered in the operations manuals. The next step will involve additional review of other supplementary materials provided by the Program Office, and under consultation with the WAM, we would use any relevant information to inform the materials developed for the study.

Since 2000, the NCS has generated planning information from a multitude of sources including the Interagency Coordinating Committee (ICC), the NCS Advisory Committee, more than 20 working groups of federal and nonfederal scientists, contract research organizations, universities, and other organizations and individuals. With this in mind, we have selected many potential sources of data to be used in developing the protocol, manuals, and OMB clearance package and IRB package that will be used to plan and implement the NC Cohort Study. ***Table 1*** provides a list of the different study components that may be included in the study, as well as a summary of the corresponding manuals and potential sources of information that could be used in their development. In addition to these materials, we expect that the draft protocol for the NCS—tentatively planned to be released at the end of 2004—will provide a wealth of information to guide the development and finalization of the operations manuals.

**Table 1. Study Requirements, Required Manuals, and Potential Sources of Information**

<b>Study Requirements</b>	<b>Required Manuals</b>	<b>Potential Sources of Information for Manuals</b>
Survey Sampling	Sampling Protocol	<ul style="list-style-type: none"><li>• NCS Advisory Committee Meeting (June 28-29, 2004)</li><li>• Gene Environment Interaction and the Regulation of Behavior Workshop (June 2-3, 2004)</li><li>• Methods for the Assessment of Asthma-Related Health Outcomes in the National Children's Study Workshop (May 27-28, 2004)</li><li>• Maternal and Fetal Infection and Inflammation Workshop (May 20-21, 2004)</li><li>• Expanding Methodologies for Capturing Day-Specific Probabilities of Conception Workshop (May 17-18, 2004)</li><li>• Tingen C, Stanford JB, and Dunson DB. Ethical Considerations	IRB Package	<ul style="list-style-type: none"> <li>• NCS Ethics Resource Guide (Draft, 2002)</li> <li>• Coughlin, SS and Beauchamp TL. 1996. Ethics and epidemiology. Oxford University Press: New York.</li> <li>• Beachamp, DE and Steinbock, B (eds). 1999. New ethics for the public's health. Oxford University Press: New York.</li> </ul>

## **5.0 Further Development of Operations Manuals**

As described above, there are a variety of sources available to begin development of operations manuals for the NC Cohort Study. Although RTI has identified these documents mainly from the NCS website and applicable work performed under the Longitudinal Cohort Study, we expect that additional input from the WAM and other study team members will be necessary to identify materials that are still under development or planned for release. Additionally, the draft NCS protocol will help to flesh out some of the details required in the operations manuals.

## **Appendix A**

### **Example of Data Systems Development Manual**

Develop Participant Identification System .....	1
Develop Sample Identification System.....	1
Develop Computer-assisted Personal Interviews (CAPI) .....	2
Draft Specifications, Program, and Test Background Questionnaire .....	2
Draft Specifications, Program, and Test Health Questionnaire .....	2

9.3.2	Pre-Coded Questions.....	9-3
9.3.3	Open-Ended Questions and Other (Specify) Fields .....	9-4
9.3.4	Don't Know, Not Applicable, and Refused Responses .....	9-6
9.4	Changing Answers .....	9-6
9.5	Range Errors .....	9-7
9.6	Question-by-Question Specifications .....	9-7
9.7	Exiting the Interview .....	9-8
9.8	Resuming the Interview After a Breakoff.....	9-8
9.9	The Help Screen.....	9-8
9.10	Viewing a Video .....	9-8
9.11	Summary of Commands .....	9-9
10.0	The Household Interview.....	10-1
10.1	Overview.....	10-1
10.2	Contacting the Selected Respondent.....	10-1
10.2.1	Obtaining Cooperation .....	10-3
10.2.2	Explaining the Cash Incentive.....	10-3
10.3	Obtaining Informed Consent.....	10-4
10.4	Answering Respondents' Questions.....	10-7
10.5	Getting Started With the Interview .....	10-8
10.5.1	Choosing a Location .....	10-8
10.5.2	Privacy .....	10-9
10.5.3	Setting up the Computer.....	10-9
10.6	Standardization of Interview Administration.....	10-10
10.7	Impaired Respondents.....	10-10
10.8	Other Interview .....	10-11
10.9	You as a Professional Interviewer .....	10-14
11.0	In-Home Medical Measurements.....	11-1
11.1	Introduction.....	11-1
11.2	Measuring Pulse and Blood Pressure.....	11-1
11.2.1	Equipment .....	11-2
11.2.2	Preparing the Respondent .....	11-2
11.2.3	Selecting and Applying the Proper Sized Cuff .....	11-2
11.2.4	Reporting Results to the Respondent .....	11-3

## **Example of Field Interviewer Manual, cont.**

11.3	Measuring Height and Weight .....	11-11
11.3.1	Preparing the Respondent .....	11-11
11.3.2	Weight Measurement Procedures.....	11-11
11.3.3	Problems Affecting Weight Measurements .....	11-12
11.4	Obtaining Medication Information .....	11-12
11.5	Making Respondent Appointments for the Phlebotomy and Clinic Visit.....	11-17
11.6	End of Interview Procedures.....	11-28
11.6.1	Obtaining Contact and Verification Information .....	11-28
11.6.2	Incentive Procedures .....	11-32
11.6.3	Thank Respondent.....	11-32
12.0	Reporting and Quality Control Procedures .....	12-1
12.1	Introduction.....	12-1
12.2	Transmitting Data to RTI.....	12-1
12.3	Mailing Materials to Your Supervisor .....	12-2
12.4	Quality Control .....	12-4
12.4.1	Practice, Monitoring, and Evaluation at Training .....	12-4
12.4.2	Weekly Conference with Field Supervisor .....	12-6
12.4.3	Verification of Fieldwork.....	12-9
12.5	FIPPs.....	12-9
12.6	Weekly Workplans .....	12-10
12.7	Chapter Highlights .....	12-11
13.0	Administrative Procedures .....	13-1
13.1	Introduction.....	13-1
13.2	Authorization for Expenditures.....	13-1
13.3	Terms of Employment .....	13-1
13.4	Filling Out and Submitting PT&Es.....	13-2
13.5	Common Errors Made Completing PT &E Reports .....	13-7
13.6	Advance Checks for Incentive Payments .....	13-8
13.7	Escorts .....	13-9
13.8	Work Absences Caused by Sickness and Vacation .....	13-11
13.9	Field Accidents and Injuries .....	13-11
13.10	Chapter Highlights.....	13-11

## **Appendix E**

### **Example of Participant Procedures Manual Outline**

\* Given to participants in a 3-ring binder.

Overview of the Study .....	1
Video .....	2
How to get Help .....	3
Schedule .....	4
Telephone reminders from RTI.....	5
Participant Procedures Checklist .....	6
Completing the Questionnaire .....	7
Collecting Surface Dust Samples.....	8
When to Collect .....	9
How to Collect.....	10
Labeling the Sample .....	11
Storing the Sample.....	12
Collecting Urine Samples .....	13
When to Collect .....	14
How to Collect.....	15
Labeling the Sample .....	16
Freezing the Sample.....	17
Collecting Saliva Samples .....	18
When to Collect .....	18
How to Collect.....	19
Labeling the Sample .....	19
Freezing the Sample.....	20
Other Samples? .....	21
Shipping the Samples to the Laboratory .....	22
Other Information .....	25

## Appendix F

### **Example of Sample Logistics and Processing Manual**

Overview.....	1
Who Provides Biological Samples?.....	2
Women- Preconception.....	3
Women- Prenatal .....	3
Women- Postnatal.....	4
Men .....	5
Newborns .....	6
Biological Sample Collection Schedule.....	7
Samples Collected at Clinic .....	8
Samples Collected by Field Interviewer .....	10
Samples Collected by Study Participants.....	11
What Environmental Samples will be Collected?.....	12
Surface Dust.....	13
Air .....	14
Water.....	15
Soil.....	16
Other?.....	17
Environmental Sample Collection Schedule.....	18
Samples Collected by Field Interviewer .....	21
Samples Collected by Study Participants.....	22
Sample Identification Numbers .....	23
ID Configuration by Sample Type.....	23
Quality Control Samples.....	24
Sample Identification Labels .....	27
Barcode Readers .....	28
Sample Tracking System .....	29
Access and Use of the System .....	30
Other Sample Documentation Required .....	32
Chain of Custody Documents .....	33
Keying Additional Information from Sample Label.....	35
Frequency of Shipments to Laboratory.....	36
Shipment Flow by Sample Type.....	38
Supplies Inventory .....	42
Biological Specimen Supplies .....	43
Environmental Sample Supplies .....	48
Terminology.....	52
